SECURITY OPERATIONS
FORTINET

fast lane

FortiSOAR Administrator

Course Description

In this course, you will learn about FortiSOAR architecture, and how to deploy, configure, manage, operate, and monitor FortiSOAR in a SOC environment. You will learn about various system customization options, HA deployment, security management using role-based access control (RBAC), and various system monitoring tools.

Product Version:

- FortiSOAR 7.6

Course Duration:

2 days

Certification:

This course is intended to help you prepare for the Fortinet NSE 6 - FortiSOAR 7.6 Administrator certification exam. This certification is part of the Fortinet Certified Professional - Security Operations certification track.

Prerequisites:

- You must have an understanding of the topics covered in FCP - FortiGate Security or have equivalent experience.
- Familiarity with SOC technologies and processes is recommended.

Outlines:

1. Introduction to FortiSOAR
2. Device Management
3. System Configuration
4. High Availability
5. Searching, War Rooms, and Upgrading
6. System Monitoring and Troubleshooting

Objectives:

After completing this course, you will be able to:

- Identify challenges of security teams, and assist security teams with SOAR best practices
- Identify the role of SOAR in assisting security teams
- Describe the basics of SOAR technology
- Manage licenses
- Deploy and manage a FortiSOAR VM
- Configure teams, roles, and users
- Configure authentication
- Schedule the purging of audit logs and executed playbook logs

- Configure playbook recovery
- Configure environment variables
- Configure company branding
- Configure system fixtures
- Configure the recycle bin
- Monitor and manage audit logs
- Use the configuration manager
- Monitor system resources
- Deploy, configure, manage, and troubleshoot a FortiSOAR high availability cluster
- Identify the types of logs used for troubleshooting
- Collect log files used for troubleshooting
- Troubleshoot key services and processes on FortiSOAR

Who should attend

This course is intended for cybersecurity professionals responsible for planning, deploying, configuring, and managing FortiSOAR deployments in a SOC environment.
